

## WHAT IS PROCAB?

ProCab-work cabins are a Finnish innovation and that are suitable to be used as a soundproof cabin, acoustic enclosure or as a hot work cabin.

ProCab is a fast and effortless solution, that significantly increases the well-being at work and improves the noise management in production cabins, both when installed on a machine and as a work cabin. The modularity enables custom executions and adds flexibility on layout planning. When ProCab is used as a soundproof work cabin it is easy to install the necessary electricity and air conditioning

- + Quick and easy to install
- + Transforms and moves with alterations
- + Increases comfort and industrial peace
- + Adjustable according to needs and brand
- + Mechanical air conditioning, integrated lighting and electricity connections

## SOUNDPROOF CABIN

ProCab is an easy and fast solution when you need for production facilities soundproof work cabin. It is perfectly suitable for an office, a machine user workspace, work management's workspace or food industry.

ProCab soundproof cabin is an innovation that can isolate to sound, dust and other impurity. In the same time the soundproof cabin opens to new opportunities for an industry space plan.

Soundproof cabins included mechanical air conditioning, integrated lighting and electricity connections.

## ACOUSTIC ENCLOSURE

The acoustic enclosure is efficient, soundproof and space saving solution for protecting machinery and its workers. Thanks to 14 millimeters thick steel surface smart modules, ProCab can achieve a notable sound attenuation, in the industrial sound environment.

At the same time the acoustic enclosure enhances the space usage in the industrial plant, as the noise hazardous area around the loud machinery decreases. ProCab can lower the noise levels by 20dB. The acoustic enclosure that is built from modules can be built in the exact size and shape as the machines and spaces allow.

## HOT WORK CABIN

With the ProCab elements it is possible to create a permanent hot work space, even into more challenging environments. Due to its nonflammable and compact structure, the sparks are easy to manage and the risk of a fire decreases significantly. The spreading of welding fumes into the spaces can be sufficiently prevented and simultaneously the overall cleanliness improves.

A hot work space that is built with ProCab can be approved with a local fire official, to use as a permanent hot work space.
